

Carolina Corn Snake

Meet Cornflake our corn snake. She is very friendly, and enjoys meeting people. Cornflake was 1 year old in October 2005, and she was about 95cms long then. Many people think snakes are slimy. Cornflake is not at all slimy...in fact she is very, very soft, dry and smooth.

Vertebrate: has bones.

Reptile: cold blooded; lays eggs; has scales.

Habitat: central and southern North America. Often found in corn fields, hence the name.

Eats: small mammals such as mice and rats.

Fascinating Facts:

They are most active at night or in the hours of dawn and dusk.

They are mainly ground-dwellers, but some can be found living in trees.

Hatchlings range in size from 22-36 cm; adults are generally 76-152 cm in length.

They can lay up to 30 eggs in a clutch.
